Share your knowledge – a Wiki open competition

At current levels of water consumption the world will be facing a 30% water gap by 2010. 70% of globally available water resources are used for food production; most of the world's water resources are managed by those who produce food. However, there has been neglect in agricultural training research and development since the 1980's. The resulting loss has set back efforts at resolving issues of efficient management knowledge how to manage food production and agriculture water resources across the world. Global climate change will put further pressure on global water resources. Only the technological, economic and ecological know-how will solve the coming water crises.

Competition

AGRIWATERPEDIA is an open-source knowledge platform. It seeks to engage those who work in agricultural water management to enhance their capacity to implement innovative solutions. AGRIWATERPEDIA would like to invite the global community of water and agriculture experts to share their knowledge on the most crucial resource of the future. For this purpose AGRIWATERPEDIA has decided to launch a competition to increase the leverage of knowledge in this area and to invite contributors to enhance the existing knowledge platform.

Prizes

AGRIWATERPEDIA is going to award prizes for the best twenty new contributions which shall be selected by a jury of internationally acknowledged experts

1st 1000€
2nd 800€
3rd 500€
4th 400€
5th-7th 300€
8th-10th 200€
11th-20th 100€

Jury

John Anthony Allan, Winner of the Stockholm Water Prize 2008, King's College London
Cecilia Tortajada, President of the Third World Centre for Water Management in Mexico
Charlotte de Fraiture, Professor of Hydraulic Engineering for Land and Water Development, UNESCO-IHE

Deadline

Contributions must be submitted by 15 November 2013
